

## **Notilyze obtains ISO and NEN certifications for data security**

May 14, 2020 - Notilyze, a supplier of analytics as a service, has obtained the ISO 27001 and NEN 7510 certifications for information security. With these certifications, the company demonstrates that it meets the highest data security standards, including specific health care requirements in The Netherlands.

Data science is a very data-intensive discipline in which it must be common practice that data is handled with care. By obtaining the certifications, Notilyze demonstrates that it meets the strict requirements for this and that data security is an integral part of its business operations.

ISO 27001 is a globally recognized standard for information security. Achieving this certification demonstrates that Notilyze has a certified data security management system that also complies with applicable privacy laws.

### **Safeguarding patient data**

In order to work with healthcare customers, it is important to be able to prove that the security of patient data is safeguarded and complies with the NEN 7510 standard set by the government. For this certification, the services of Notilyze have therefore recently been tested by an independent certification body that ultimately granted the NEN 7510 certification.

"At Notilyze, we take information security and privacy very seriously and do everything we can to support our customers in this area", said Tom Dogger, co-founder of Notilyze. "By obtaining the ISO and NEN certifications, we demonstrate that our services meet the strictest requirements in terms of availability, confidentiality and integrity of information. With this, our customers are assured that their data and information will be treated with the utmost care by Notilyze. "
